

PROFESSIONAL SUMMARY

Full-Stack Developer with **3+ years** of experience delivering end-to-end web solutions. Specializing in React.js, PHP (Laravel), and MySQL, with a strong focus on bridging business requirements and scalable technical architecture. Experienced in JWT authentication, RESTful API design, and data-driven systems. Currently co-building an AI-powered product — applying practical experience in prompt engineering and multi-source API integration.

TECHNICAL SKILLS

Frontend	React.js, TypeScript, Angular 19, Tailwind CSS, Bootstrap
Backend	PHP (Laravel), MySQL, RESTful APIs, JWT Authentication
AI & Integrations	Claude API, OpenAI, Groq (LLaMA), Prompt Engineering, n8n Workflows
Tools	Git, GitHub, Postman, Adobe XD, Next.js

KEY PROJECTS

Fazaa — AI-Powered Recommendation Engine

Co-Founder & Lead Developer

Built a full AI pipeline integrating multiple Arabic-language data sources with large language models for NLP processing, trust scoring, and personalized output generation. Designed and implemented the core matching engine from scratch.

- Architected end-to-end pipeline: multi-source data ingestion → cleaning → LLM analysis → ranked output
- Integrated Groq (LLaMA 3.3 70B) and Claude API for Arabic NLP, semantic analysis, and confidence scoring
- Built custom Trust Engine: cross-references user profile with source data for high-confidence recommendations
- Engineered n8n automation workflows for scheduled data collection, processing, and delivery
- Designed Arabic-first UX with Next.js App Router and server-side rendering for performance

Stack: Next.js · Claude API · Groq (LLaMA) · SerpAPI · Apify · Arabic NLP · n8n · TypeScript

BIOLOOP — Smart Waste Management Platform

UX / Frontend Developer

Bilingual (FR/AR) Angular 19 SPA built for an IoT startup preparing investor demos. Full RTL support, dark mode, and real-time email integration.

- Architected 12-section SPA with standalone components, Angular Signals, and ngx-translate (FR/AR + RTL switching)
- Integrated EmailJS — appointment requests routed directly to team inbox with client-side form validation
- Built 3 interactive modals: team showcase, demo request, and IoT prototype (Arduino → Raspberry Pi + YOLO vision)
- Implemented site-wide dark mode, scroll animations, animated hero with floating IoT badges, and route protection

Stack: Angular 19 · TypeScript · Tailwind CSS · ngx-translate · EmailJS · Angular Router · RxJS

Old Book Management Platform

Full-Stack Application | PHP · Laravel · React.js

End-to-end marketplace for buying and selling used books. Built the full backend from scratch including a custom JWT authentication system — registration, login, token refresh, and protected routes. Designed and consumed a RESTful API from a React.js frontend with role-based access control (admin / buyer / seller).

- Built complete JWT auth: hashed passwords, access/refresh tokens, middleware-protected API endpoints
- Implemented full CRUD for book listings with image upload, category filtering, and full-text search
- Designed cart and order management system with status tracking (pending → confirmed → delivered)
- Built admin panel: user management, listing moderation, order overview, and analytics

Stack: React.js · Laravel · MySQL · JWT · PHP · Bootstrap · REST API

Direction — Career Guidance Platform

Full-Stack Application | PHP · MySQL · React.js

Full-stack platform helping students identify the right career path through a custom-built assessment engine. Built two separate interfaces — a public-facing step-by-step test experience and a complete admin dashboard. Currently integrating AI for deeper personalization.

- Engineered custom assessment logic: multi-step test with weighted scoring and path-matching algorithm
- Built personalized result engine: matches user answers to career profiles and surfaces relevant experts
- Developed expert directory with filtering, profile pages, booking inquiry, and admin moderation
- Built admin dashboard: manage experts, update career paths, track user results and engagement
- Step-by-step UX with progress bar, mobile-responsive, designed to reduce decision fatigue

Stack: PHP · MySQL · React.js · HTML/CSS · REST API | AI integration in progress

Kids' Cinema & Entertainment Hub

React Application

- Live movie API integration with safe content filtering and interactive UI for children

Stack: React.js · External APIs

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer

Self-Employed | Remote | Jan 2023 – Present

- Delivering end-to-end React and PHP solutions tailored to client business requirements
- Managing full SDLC — from wireframing and UX design to backend architecture and production deployment

Full-Stack Developer — MK Aero

Tangier, Morocco | Jan 2019 – May 2023

Built an internal HR Training Management System for a 200+ employee aviation company, replacing a fully manual process.

- Designed auto-enrollment logic — employees automatically assigned to training courses based on job role
- Built 3-tier smart notification system: trainers (7/3/1 day reminders + attendee lists), employees (enrollment + reminders), HR (absences + mandatory course alerts)
- Implemented real-time attendance tracking with automatic HR alerts for late or absent employees
- Delivered automated monthly/annual compliance reports — exported to Excel & PDF on schedule
- Built HR dashboard with filtering by department, role, and date — with manual override capability

Results: saved 15+ hrs/week for HR · reporting time from 3 days → 5 minutes · attendance rate improved significantly

Stack: PHP (Laravel) · MySQL · Laravel Mail + Queues · JavaScript · HTML/CSS

Full-Stack Developer — Souriau-Sunbank

Tangier, Morocco | Jan 2018 – May 2019

Built 'Défautheque' — an internal defect tracking system for the Quality Department, replacing manual paper-based logging in a manufacturing environment.

- Designed full defect lifecycle tracking: discovery → diagnosis → resolution with timestamped audit trail
- Built product history lookup by serial number — full quality journey from production to shipping in seconds
- Implemented image upload system for visual defect documentation linked to product records
- Created analytics dashboard: defect frequency by area/line, severity classification, and trend charts
- Reduced critical defect response time from hours to minutes; cut report preparation by 80%
- Automated 30% of manual tasks via VBA reporting workflows

Results: full product traceability · instant recurring-defect detection · data-driven quality decisions

Stack: PHP · MySQL · VBA · JavaScript · HTML/CSS · File Management System

EDUCATION

Web Development Certification — Centre SOLICODE

2020 – 2022

Multimedia Development Diploma — OFPPT, Tangier

2016 – 2018

LANGUAGES

Arabic (Native) · English (Professional) · French (Beginner) · Spanish (Basic)
